

PREFACE

This publication, Interbull Bulletin 43, is the proceedings of the third Interbull Genomics Technical Workshop, held during February 27-28, in Guelph, Canada.

The pace of changes in the area of genomics, including implementation of genomic methods in the national genetic evaluation of dairy populations, is unprecedented. As is the case for in any other novel methodology, there is a need for new visions as new refinements to the methodology are being made. The third Interbull Genomics Technical Workshop was a good example of responding to these two needs. Visionary talks (both scientific and organizational) were mixed with technical presentations.

This publication is financed by Interbull member organisations. Their interest and co-operation are sincerely appreciated.

The contribution of Monica Jansson to the preparation of this Bulletin is gratefully acknowledged.
