

FACTS ON SIRE EVALUATION PROCEDURES APPLIED FOR PRODUCTION TRAITS

COUNTRY: THE NETHERLANDS

Breed(s)	Black and White, Red and White
Trait(s) evaluated and unit(s) of measurement	Milk (kg), fat and protein (kg, %). Percentages are calculated from EBV for yields by: $BVP_i = (100 \cdot BVY_i - BVM \cdot MUP_i) / (BVM + MUM)$ where: $BVP_i = EBV \text{ for fat,protein } \%$ $BVY_i = EBV \text{ for fat,protein kg}$ $BVM = EBV \text{ for milk yield}$ $MUP_i = \text{average adj. fat,protein } \% \text{ of the base animals}$ $MUM = \text{average adjusted milk yield of the base animals}$
Number of lactations	3
Genetic parameters assumed	$h^2:\text{yield} = 0.30$
Criteria for inclusion and extension of records	Official first, second and third 305 day lactation records with calving date in 1978 and onwards of official pedigree recorded cows are included. Lactation length ≥ 60 days extended to 305 days
Sire categories evaluated	All sires
Environmental effects considered by pre-adjustment by evaluation model	Age (multiplicative), DO (multiplicative) and heterosis / recombination Herd*parity*year*season, year*month of calving
Base for age adjustment (months)	24 months
Use of genetic groups and/or relationships	Unknown parents are grouped by country or origin, selection path, breed and birth year/ All known relationship of cows with records with parents and grand parents is considered. For sires genetic relationships with their parents and grand parents is considered
Method of evaluation	ST BLUP repeatability AM
Expression of proof	EBV (kg, %)
Genetic (reference) base	Stepwise fixed base as the average EBV of daughters of young bulls (bulls which had a first official proof based on progeny in 1988). Two bases are used, which is according to breeding goal rather than breeds (dairy vs. dual purpose). Dairy: Daughters with at least 51% HF genes of Black and White young bulls in 1988. Dual purpose: Daughters with at least 51% MRY genes of Red and White young bulls in 1988.

FACTS ON SIRE EVALUATION PROCEDURES APPLIED FOR PRODUCTION TRAITS

COUNTRY: THE NETHERLANDS

Criteria for official publication of sire proofs	REL ≥ 0.50, 15 daughters in 5 herds
Number of evaluations/publications per year	2/2 (april, october)
Use of production index	Net Profit Index (in Dutch guilders): -0.15*EBV milk+ 2*EBV fat kg+ 12*EBV protein kg
Name, address and faxnumber of organization responsible for sire evaluation and publication	Royal Dutch Cattle Syndicate P.O. Box 454 6800 AL Arnhem The Netherlands Tel: +31-85-861111 Fax: +31-85-861520
