**ITALY**

| **Growth & beef traits** | Daily gain  
|                         | Carcass conformation  
|                         | Dressing percentage  

| **Breed(s)** | Italian Simmental  
| **Trait definition and unit(s) of measuring** | Daily gain between 20 and 52 weeks  
|                         | Carcass conformation is scored on EUROP-scale  
|                         | Carcass weight divided by liveweight, estimated on live animals  

| **Type of recording and evaluation** | Own performance at station  

| **Time period for data inclusion** | Since 1985  

| **Genetic parameters** | Phenotypically evaluated  

| **Sire categories evaluated** | All sons of designated bull dams  

| **Environmental effect pre-adjustment evaluation model** | None  
| Monthly contemporary groups  

| **Base for age adjustment** | None  

| **Method (model) of genetic evaluation** | Residuals within monthly groups  

| **Evaluation system validation** |  

| **Expression of proof** | Phenotypic results  
|                         | Utile Lordo Stalla = daily gain x dressing percentage x price of EUROP-class  

| **Genetic (reference) base** | Mean within monthly group  

| **Criteria for official publication of sire proofs** | All available results will be published  

| **Number of evaluations/publications per year** | Every month  

| **Use in total merit index** | No
